1. Solution Assessment (As-Is)

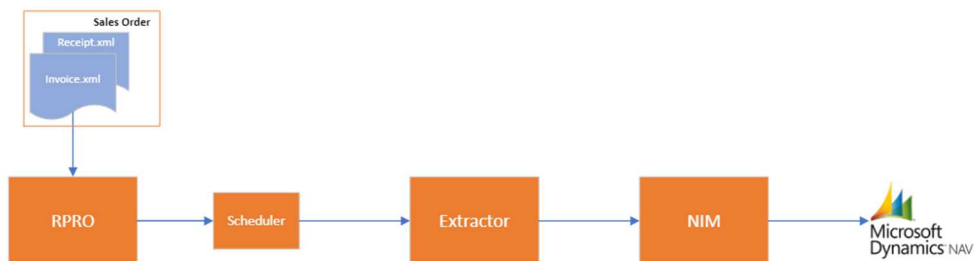

1.1 System Integration Module (Core Apps)

1.1.1 Flow Process Procure-to-Pay (As Is)

1. Any Procure-to-Pay transactions will be generated as data (voucher and invoice) in the form of an XML file and send it to RPRO.
2. The Extractor will retrieve and oversee the P2P data from RPRO, triggered by a scheduler. It will then transmit the data to NIM.
3. NIM will process the data following NAV's format. Once it's done, NIM will forward the data to NAV as a Purchase Journal.
4. NAV will store the data, making it ready to be posted by the user.

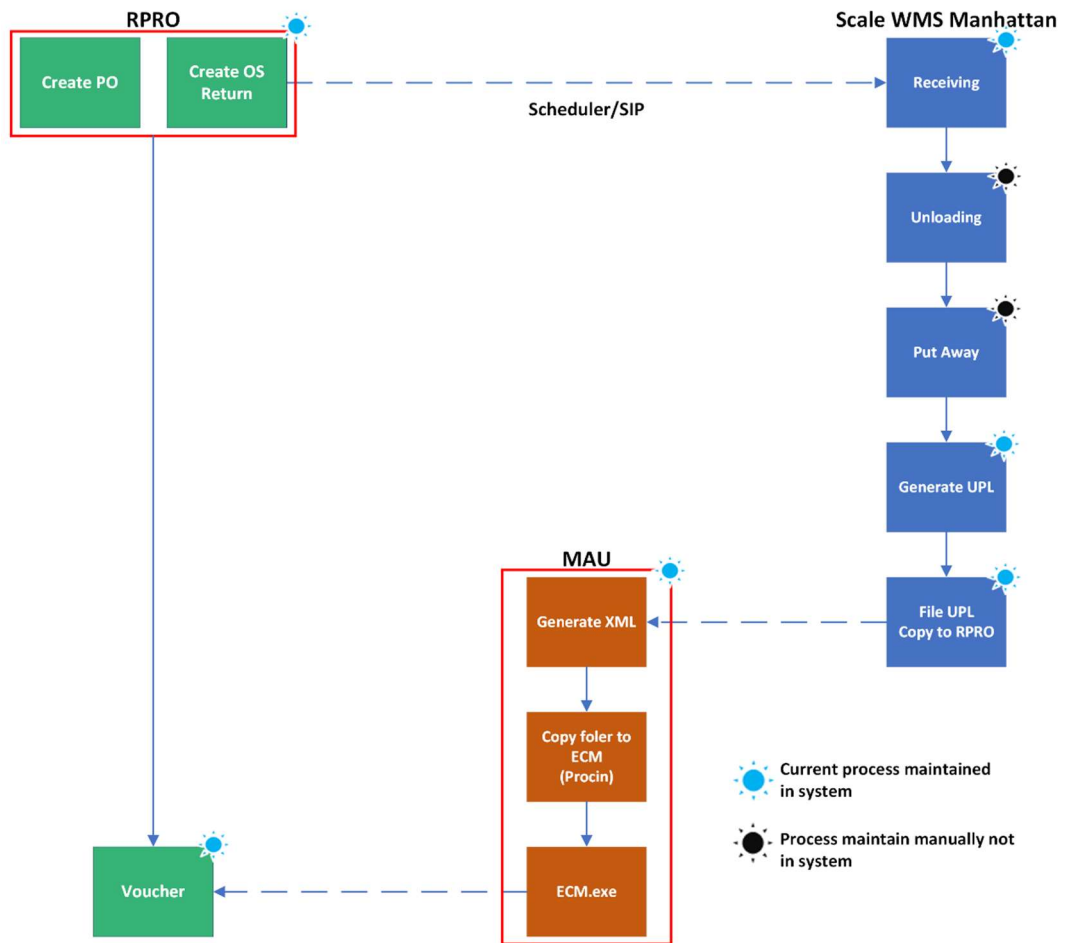

1.1.2 Flow Process Order-to-Cash (As Is)

1. Any order-to-cash transactions are generated as data (receipt and invoice) in the form of an XML file and send it to RPRO.
2. The Extractor will retrieve and oversee the O2C data from RPRO, triggered by a scheduler twice per day (11 a.m. & 1 p.m.). It will then transmit the data to NIM.
3. NIM will process the data following NAV's format. Once it's done, NIM will forward the data to NAV as a sales journal.
4. NAV will store the data, making it ready to be posted by the user.

1.1.3 Flow Process Inventory (As Is)

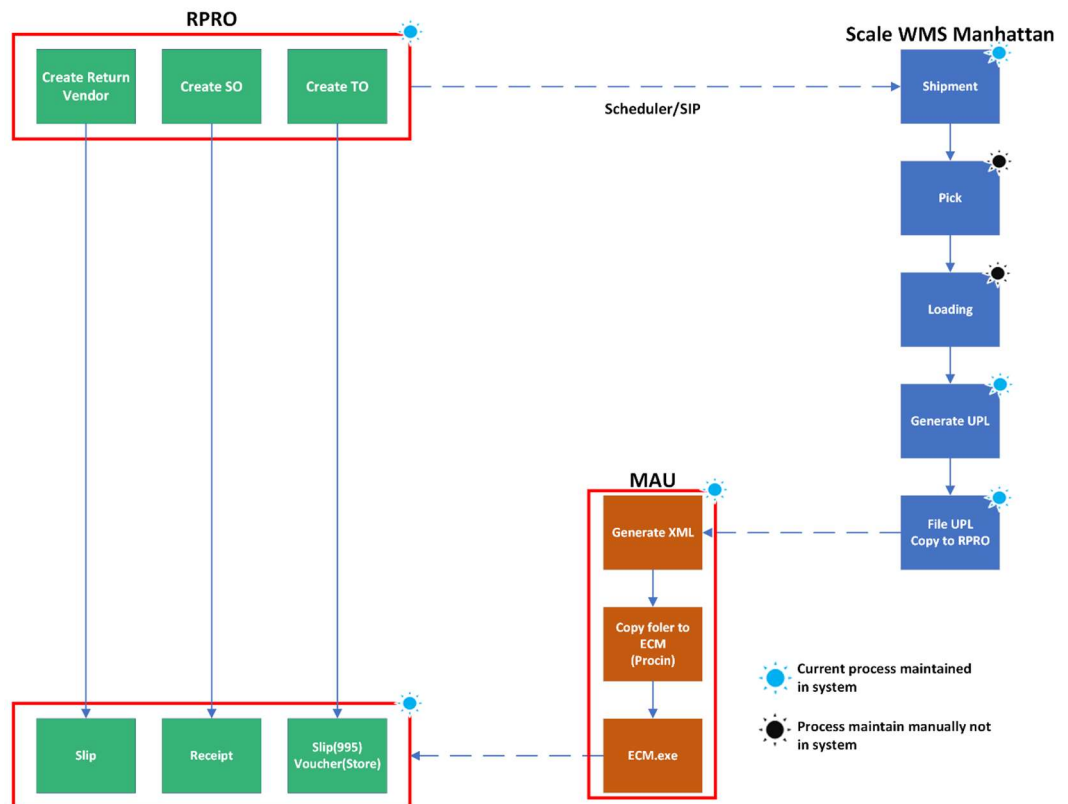

- Inbound Process

From the assessment result, we can see the flow process exist in Kanmo for inventory. The process marked with the blue sun is the current process maintain in system and the process marked with the black sun is the current process maintain not in system. The following is a description of the process flow:

1. User sending inbound document in RPRO v.9 to Scale using Scheduler/SIP
2. Then, the Warehouse Team receives an inbound document from RPRO v.9
3. After that, the Warehouse Team performs the warehouse process (included Unloading from containers and Putting Away goods)
4. End of days, Warehouse Team generates UPL for RPRO v.9
5. UPL is converted first into XML via MAU to get vouchers (increase stock)
6. Then put it in the ECM folder.
7. ECM.exe running the process.
8. After that it is interfaced to RPRO v.9 and becomes Voucher

- Outbound Process

From the assessment result, we can see the flow process exist in Kanmo for inventory. The process marked with the blue sun is the current process maintain in system and the process marked with the black sun is the current process maintain not in system. The following is a description of the process flow:

1. User sending outbound document in RPRO v.9 to Scale using Scheduler/SIP
2. Then, the Warehouse Team receives an outbound document from RPRO v.9
3. After that, the Warehouse Team performs the warehouse process (includes picking of item and Loadings to containers)
4. End of days, Warehouse Team generates UPL for RPRO v.9
5. UPL is converted first into XML via MAU to get vouchers (increase stock in stores) and slips (reduce stock in RPRO v.9)
6. Then put it in the ECM folder.
7. ECM.exe running the process.
8. After that it is interfaced to RPRO v.9 and becomes Receipt for SO transaction, Slip for Return Vendor transaction, and Slip (995) and Voucher (Store) for TO transaction.

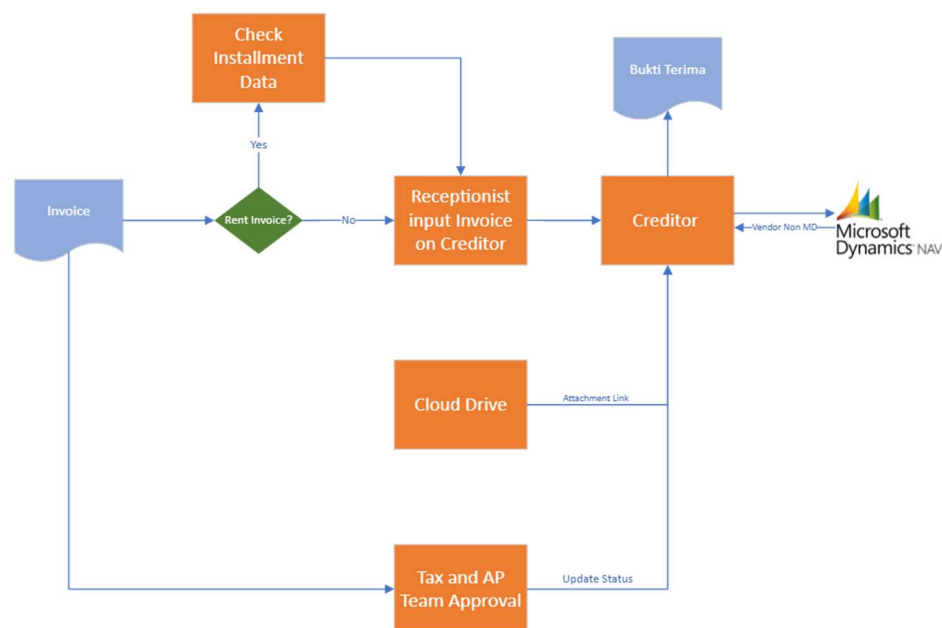

1.2 System Integration Module (Surrounding Apps)

1.2.1 Flow Process Petty Cash System (As Is)

1. The store will note its expenses on PCS.
2. PCS will record the expenses and convert them into a journal following NAV's format.
3. PCS will send the converted expenses data to NAV's database.
4. NAV will store the data, making it ready to be posted by the user.

1.2.2 Flow Process Creditor (As Is)

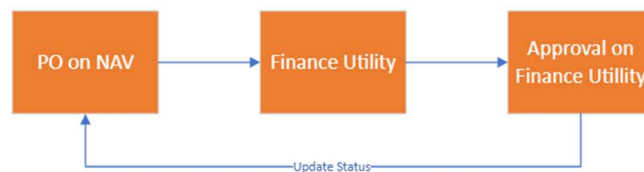

1. The receptionist will receive an invoice from the vendor.
2. If it's a rent invoice, the receptionist will first check the installment data and then input it into Creditor.
3. Creditor will generate a Bukti Tanda Terima form.
4. The Tax and AP team will process for approval, and then update the invoice status.
5. User will input Invoice data to NAV and proceed to the next step.

1.2.3 Flow Process Cloud Drive (As Is)

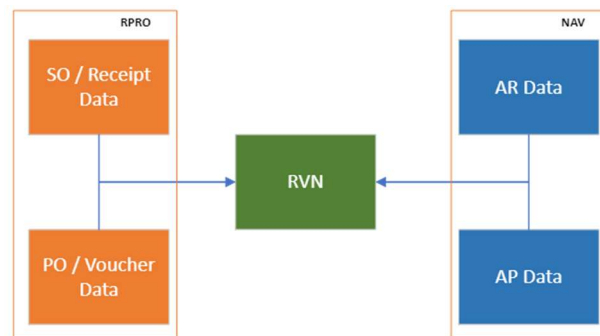

1. Every time the AP Team creates a PO document with an attachment, the user must attach the document to the Cloud Drive first.
2. Once the attachment is uploaded, the user should copy the link and place it in NAV.

1.2.4 Flow Process Finance Utility (As Is)

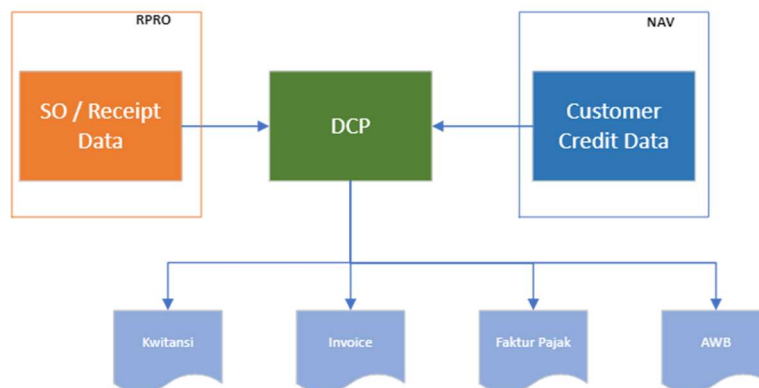

1. The AP Team creates a PO in NAV.
2. The manager will approve the PO using Finance Utility.
3. Once the PO is approved, the PO Status in NAV will be updated.

1.2.5 Flow Process RPRO Vs NAV (As Is)

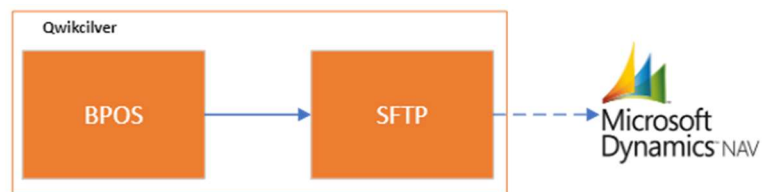

RVN (RPRO vs NAV) is an application for reconciling data between RPRO and Navision. The data to be reconciled includes AP and AR Data. This app will start by collecting RPRO and Navision data based on the date filter provided by the user, and then provide the results as a simple report with remarks indicating whether the data matches or doesn't match.

1.2.6 Flow Process Distribution Control Panel (As Is)

DCP (Distribution Control Panel) is an application designed to check whether an SO transaction has been paid or not. This application retrieves SO Data from RPRO and Customer Credit Data from NAV, allowing the AR team to determine if the customer has fully paid for the SO. Additionally, this application can generate various documents such as kwitansi, faktur pajak, invoice, and AWB.

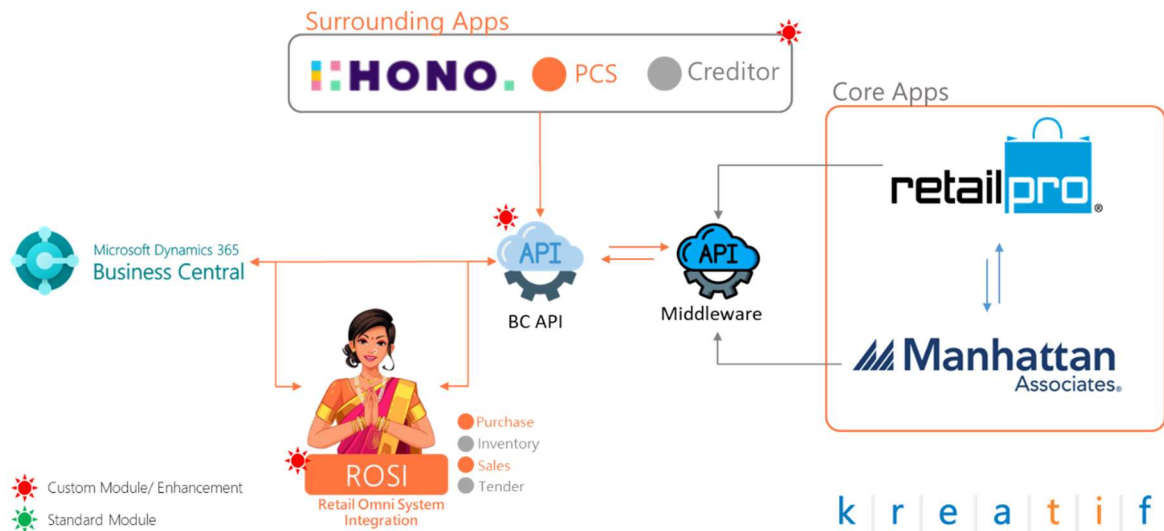

1.2.7 Flow Process BPOS (As Is)

BPOS is an application developed by Qwikilver, serving as a Point of Sale (POS) for trading voucher transactions. Every night at 2 a.m., BPOS will share transaction data in the form of a CSV file to SFTP. This CSV file will serve as the foundation for the finance team to create a journal manually.

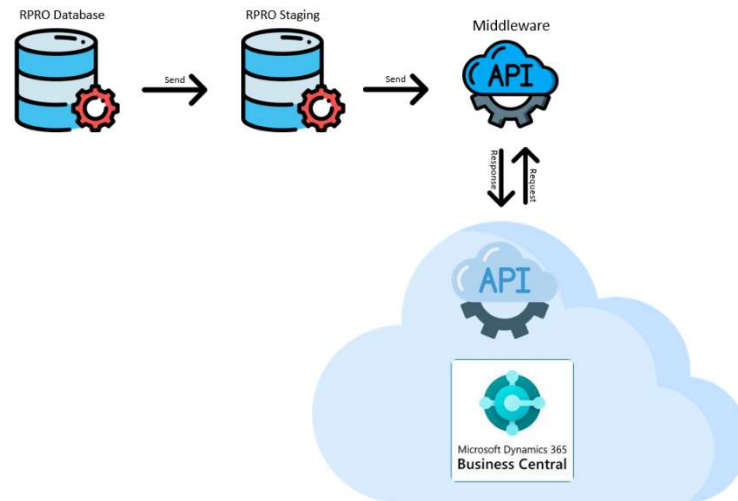

2. Propose Solution

System Integration (To-Be)

2.1 System Integration Module (Core Apps)

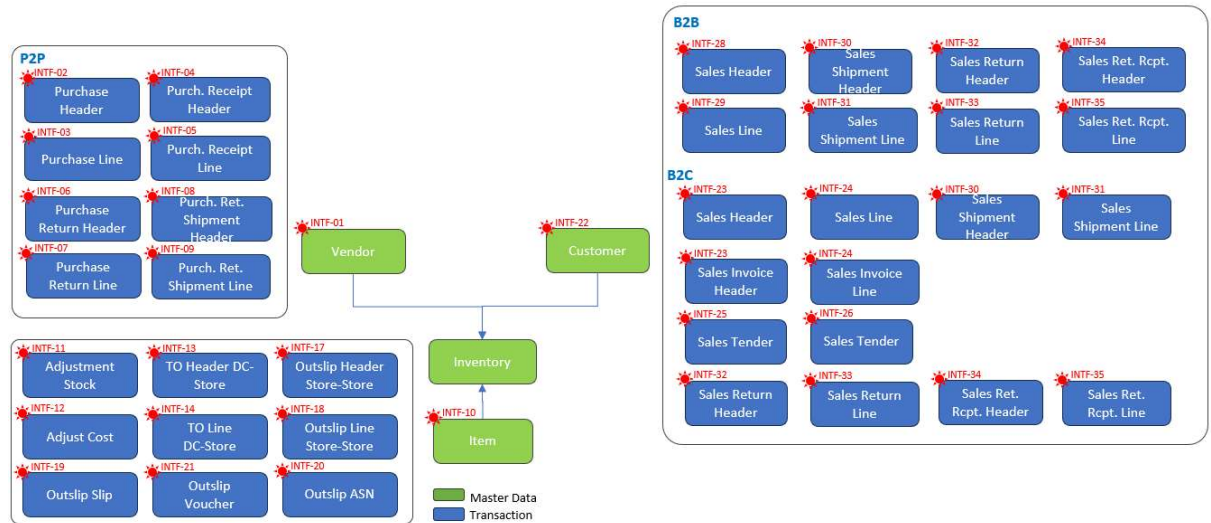

2.1.1 System Integration Schema (To Be)

All integrated transactions will originate from RPRO Database. The data will be transmitted to BC using a middleware developed by RPRO Team. BC will provide various APIs as a bridge, facilitating the transfer of data from the middleware to BC.

1. Connect database via API
2. GET / POST JSON to Cloud

2.1.2 Integrated Transactions (To Be)

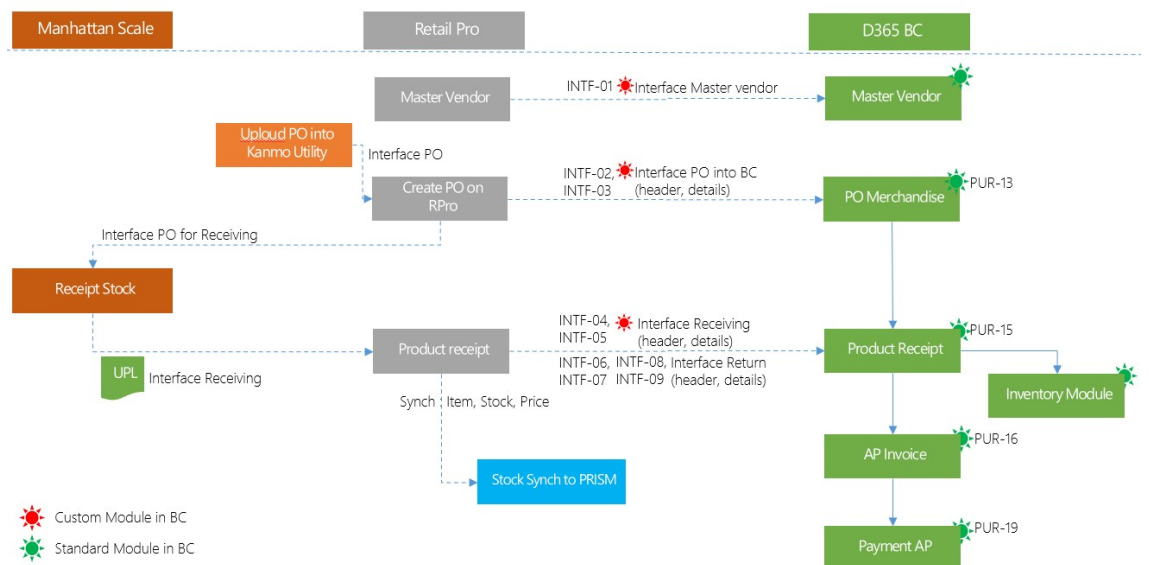

Several types of transactions will be integrated between RPRO and BC. These integrated transactions include P2P, B2B, Inventory, as well as master data such as Vendors, Customers, and Items.

BC has comments field at header level, such as sales header, transfer order header, etc. If required to record multi comment on same transaction, Custom development is required to record comments at line level. To make the reconciliation process easier.

On Rpro, there is a field SID mandatory to integrate to BC and will be a Primary Key on BC. Detail mapping field integration (e.g SID no, etc information) will be provided on Development document.

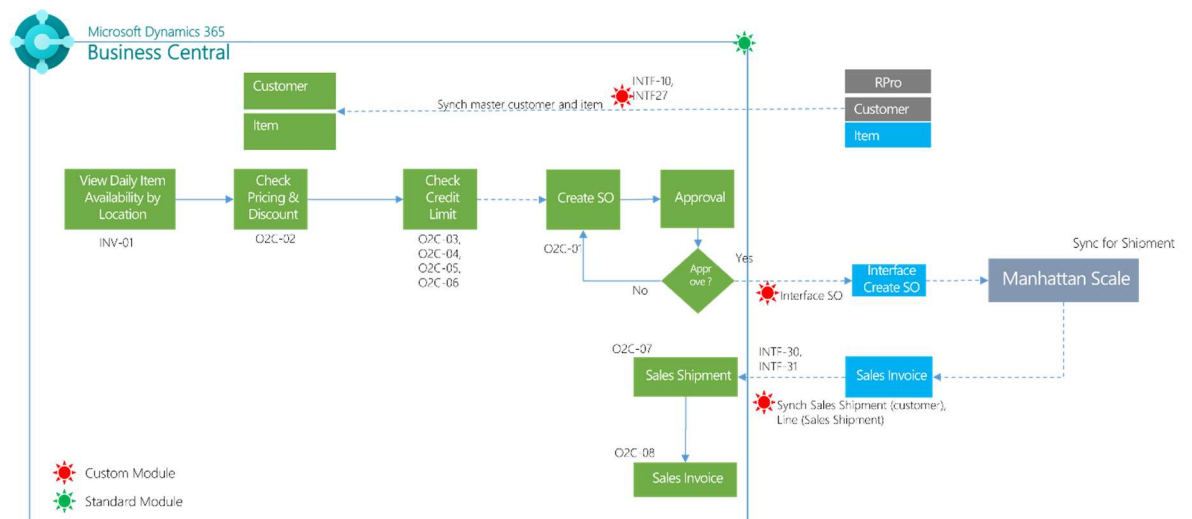

2.1.3 Flow Process Procure-to-Pay (To Be)

The picture above is a merchandise local and import process flow in Business Central. The red sun sign is a custom module while the green sun sign is a standard module at business central the following is a description of the process flow:

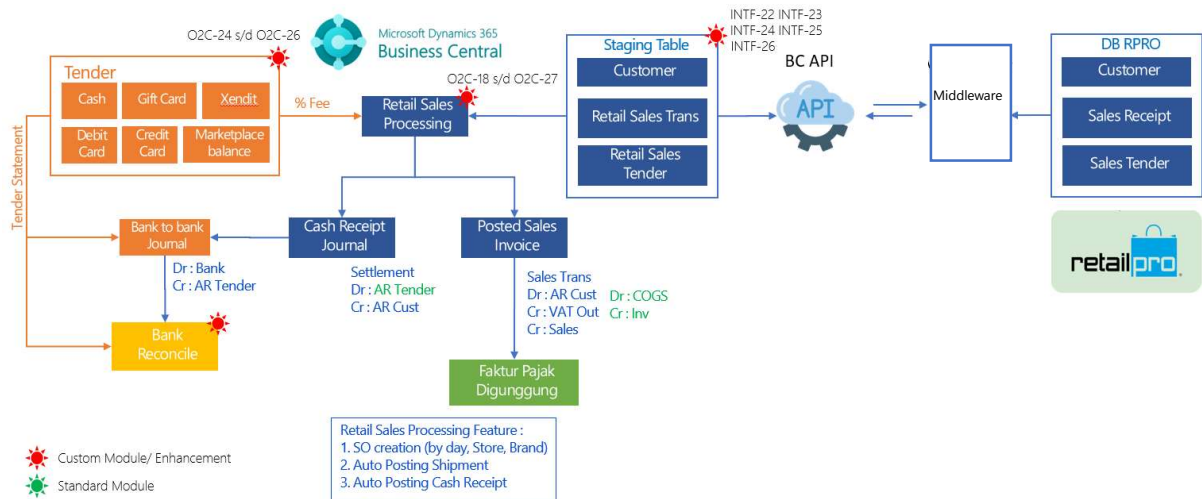

1. Master vendor in RPRO v.9 will be interfaced into business central.
2. Merchandise team creates a PO in excel then upload it into Kanmo Utility System.
3. The PO will then be interfaced into RPRO v.9 for PO creation.
4. Once the PO has been created in RPRO v.9, it will be interfaced into Manhattan Scale for receiving and into D365 BC for processing the PO by API.
5. The PO will be processed in D365 BC.
6. On scale, there will be a receipt stock process that generates a UPL file.
7. Then receiving UPL file will be interfaced on RPRO v.9, afterwards the UPL will interface on Business Central by API from RPRO v.9.
8. When the product receipt process is completed in Business Central, it will enter the inventory module in D365 BC.
9. On RPRO v.9, after the product receipt is processed, it will enter PRISM. Stock will be synchronized into PRISM.
10. Then after the product is received in Business Central, an AP Invoice will be made and proceed to the payment app.

2.1.4 Flow Process Order-to-Cash B2B (To Be)

1. Customer and item master data are interfaced into Business Central from RPRO V.9.
2. Distribution team can view item availability, check pricing and discount, and check credit limit in Business Central as consideration. Sales Order will be created on Business Central.
3. Then there is approval if it is approved then the system will continue the interface process to RPRO V.9 and will then be forwarded to Manhattan for the shipment process. if it is not approved then the process will return to SO creation
4. After inventory and shipment transaction created in Manhattan Scale, it will create Sales invoice in RPRO V.9 then synch Sales Shipment and Sales Invoice in Business Central.

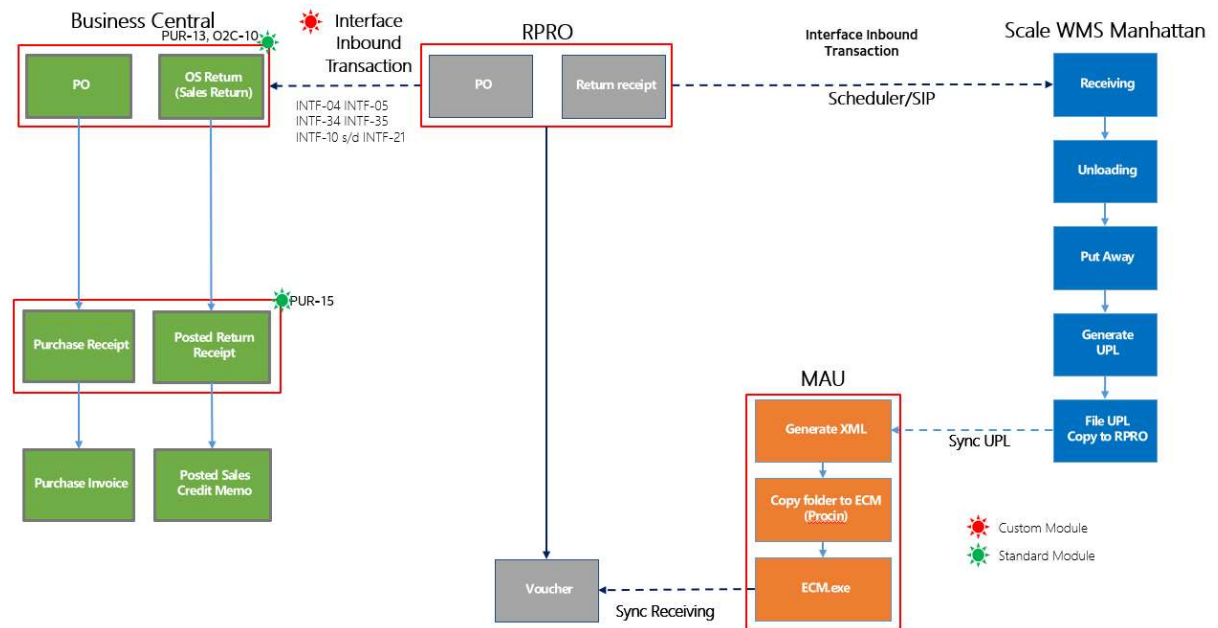

2.1.5 Flow Process Order-to-Cash Retail (To Be)

1. Middleware gets the data from RPRO Database.
2. Middleware calls BC API Post Method with the JSON to send the data to BC as real time as possible.
3. Sales data stored in staging table (BC).
4. User creates SO grouped by day, store, subsidiary.
5. Finance will review the SO on D365 BC. In this part, finance team can process item sales and total tender declaration.
6. If there is no issue, finance continues process posting Sales Transaction and Cash Receipt Journal.
7. If have some issues, finance will contact IT team and store staff to cross check data.
8. Finance team will cross check fund receiving on bank from each tender type.
9. Finance team review total receiving on bank versus AR Tender.
10. If no issue, finance continue process posting Bank to Bank Journal.
11. If have issue, finance will contact IT team and store staff to cross check data.
12. SO in BC will follow Tax which calculated by RPRO.
BC will have summary B2C Sales Tax data as a basis data for Tax dept processing retail tax reporting (Digunggung).
13. For retail tender reconciliation purpose, BC required to have unique information (approval code, MID, TID) provided by RPro. As long as detail data can provided, it possible to do reconciliation between Tender type and bank statement.

2.1.6 Flow Process Inventory (To Be)

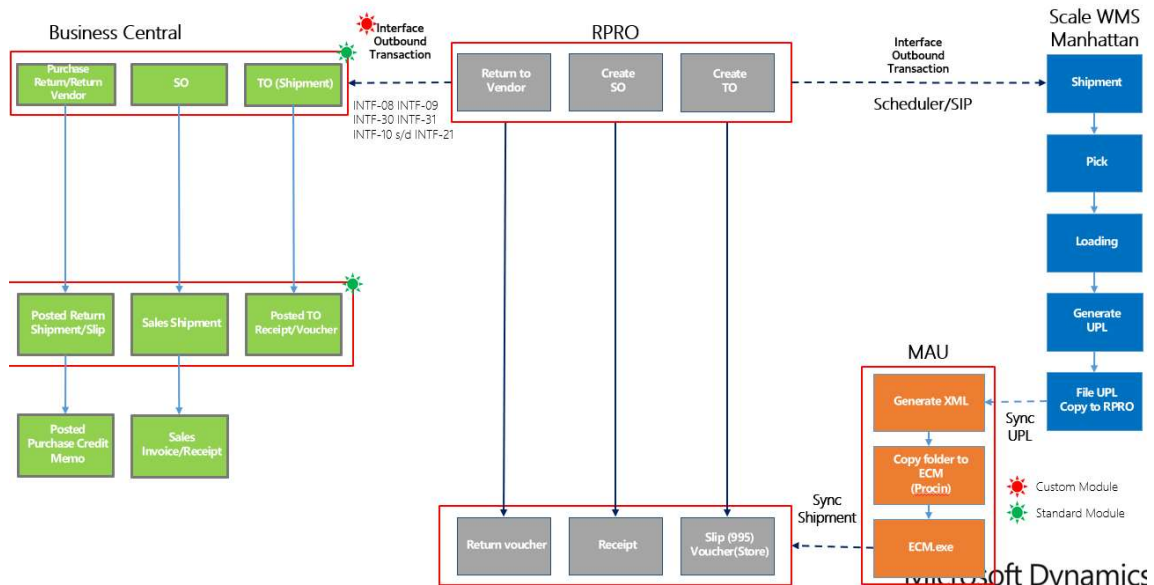

• Inbound Process

The picture above is an inventory inbound process flow in business central (D365 BC). The red sun sign is a custom module while the green sun sign is a standard module at business central. The following is a description of the process flow:

1. User creates inbound transaction on RPRO v.9 then send to Scale using Middleware and interfaces to D365 BC
2. Then, the Warehouse Team receives an inbound transaction from RPRO v.9 for receiving item.
3. After that, the Warehouse Team performs the warehouse process (included Unloading from containers and Putting Away goods)
4. Then, warehouse team can synchronize their receiving document on Scale to RPRO v.9 by middleware.
5. After that, receiving document on RPRO v.9 synchronize automatically to D365 BC by API then D365 BC creates Purchase Receipt for PO and Posted Return Receipt for Sales Return, otherwise RPRO v.9 creates Voucher for Inbound transaction.
6. Custom Open API will provided if other reporting tools need to consume data from BC. For example BC will provide an Inventory API that can be filtered by date and item. This API can be used by DWH to retrieve Inventory Data from BC.

- Outbound Process

The picture above is an inventory outbound process flow at business central (D365 BC). The red sun sign is a custom module while the green sun sign is a standard module at business central. The following is a description of the process flow:

1. User creates outbound transaction on RPRO v.9 then send to Scale using Middleware and interfaces to D365 BC.
2. Then, the Warehouse Team receive an outbound transaction from RPRO v.9 for shipment item.
3. After that, the Warehouse Team performs the warehouse process (includes picking of item and Loadings to containers).
4. Then, warehouse team can synchronize their shipment document on Scale by generate UPL to RPRO v.9 by middleware.
5. After that, shipment document on RPRO will synchronize automatically to BC by API then D365 BC creates Sales Shipment for SO and Posted Return Shipment for Purchase Return and TO Shipment (Slip) and TO Receipt (Voucher) for TO, otherwise RPRO v.9 creates Return Voucher for Return to vendor, Receipt for SO transaction, and Slip (995) and Voucher (Store) for TO transaction.

2.1.7 Fit Gap List

No	Description	Fit or Gap	Type
INTF-01	Integration P2P - Vendor	Gap	Integration
INTF-02	Integration P2P - Purchase Header	Gap	Integration
INTF-03	Integration P2P - Purchase Line	Gap	Integration
INTF-04	Integration P2P - Receipt Header (Voucher)	Gap	Integration
INTF-05	Integration P2P - Receipt Line (Voucher)	Gap	Integration
INTF-06	Integration P2P - Purchase Return Header	Gap	Integration
INTF-07	Integration P2P - Purchase Return Line	Gap	Integration

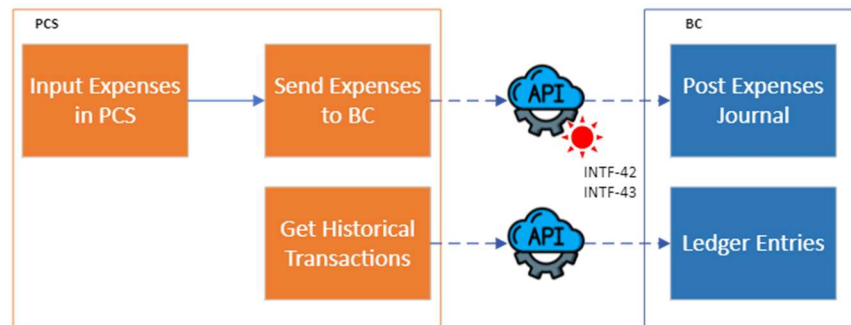

INTF-08	Integration P2P - Purchase Return Shipment Header	Gap	Integration
INTF-09	Integration P2P - Purchase Return Shipment Line	Gap	Integration
INTF-10	Integration Inventory - Item	Gap	Integration
INTF-11	Integration Inventory - Adjustment Stock	Gap	Integration
INTF-12	Integration Inventory - Adjustment Cost	Gap	Integration
INTF-13	Integration Inventory - Transfer Order Header (DC-Store)	Gap	Integration
INTF-14	Integration Inventory - Transfer Order Line	Gap	Integration
INTF-15	Integration Inventory - TO - Slip	Gap	Integration
INTF-16	Integration Inventory - TO - Voucher	Gap	Integration
INTF-17	Integration Inventory - Out Slip Header (Store-Store)	Gap	Integration
INTF-18	Integration Inventory - Out Slip Line	Gap	Integration
INTF-19	Integration Inventory - OS - Slip	Gap	Integration
INTF-20	Integration Inventory - OS - ASN	Gap	Integration
INTF-21	Integration Inventory - OS - Voucher	Gap	Integration
INTF-22	Integration O2C - Retail - Customer	Gap	Integration
INTF-23	Integration O2C - Retail - Sales Invoice Header (Receipt)	Gap	Integration
INTF-24	Integration O2C - Retail - Sales Invoice Line (Receipt)	Gap	Integration
INTF-25	Integration O2C - Retail - Sales Tender Header	Gap	Integration
INTF-26	Integration O2C - Retail - Sales Tender Line	Gap	Integration
INTF-27	Integration O2C - Magento - Tender Payment	Gap	Integration
INTF-47	Integration Multiline Comments	Gap	Integration

Notes:

The Fit and Gap mentioned in the BRD is subject to change, and the Fit and Gap Excel list, which will be finalized outside the BRD and confirmed via email, will take precedence over the BRD. The BRD signoff is subject to Kanmo Management final sign off and changes if any will be discussed.

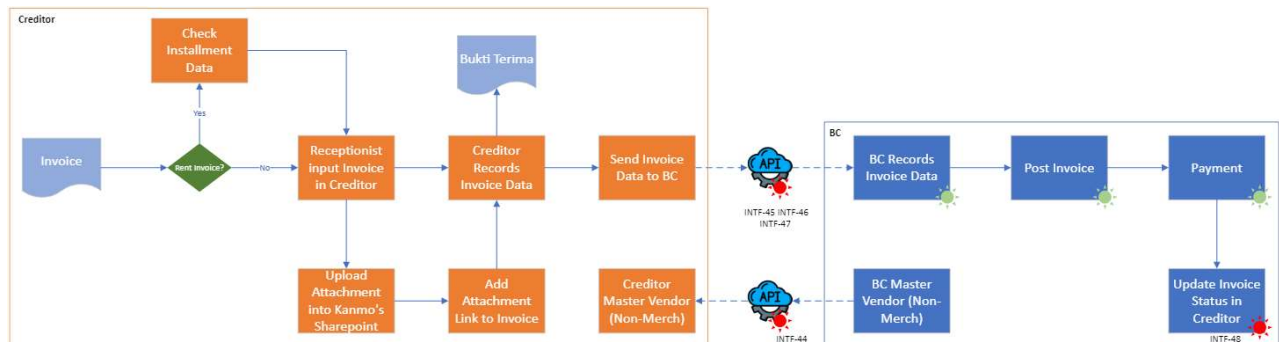

2.2 System Integration Module (Surrounding Apps)

2.2.1 Flow Process Petty Cash System (To Be)

1. User inputs expense data into PCS based on store's expenses.
2. After the expenses paid, PCS will adjust the data format according to BC format and send the data to the journal table in BC via API.
3. PCS will update the expense status based on data in BC generated by API.
4. Once the expense has been paid, user will check the expense data in BC and then post the journal.
5. PCS will get the historical transaction data in BC by API.

2.2.2 Flow Process Creditor (To Be)

1. Receptionist will receive an invoice from vendor.
2. If it's a rent invoice, Receptionist will first check the installment data and then input it into Creditor.
3. Receptionist will also upload the hardcopy of the invoice as an attachment to Kanmo's SharePoint and then add the attachment link to the invoice data.
4. Creditor will generate a Bukti Tanda Terima form.
5. Creditor will prepare and send the invoice data to the invoice table in BC via API.
6. After BC receives the invoice data, the Tax and AP team will proceed to approve the invoice.
7. Creditor will access Historical Transactions API to check the status.
8. BC will also provide Vendor Non-Merchandise Data for Creditor.

2.2.3 Flow Process Cloud Drive (To Be)

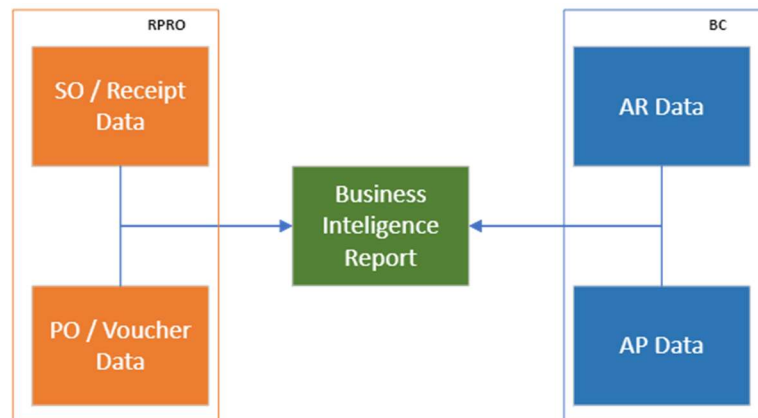

1. Every time AP Team creates a PO document with an attachment, user must attach the document to the Kanmo's Sharepoint first.
2. Once the attachment is uploaded, the user should copy the link and place it in BC.

2.2.4 Flow Process Finance Utility (To Be)

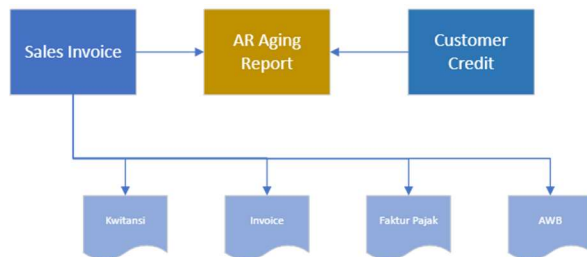

1. The AP Team creates a PO in BC.
 2. The manager will approve the PO in BC.
- *Only standard transaction could be using approval workflow (Purchase Order, Sales Order, Journal)*

2.2.5 Flow Process RPRO Vs NAV (To Be)

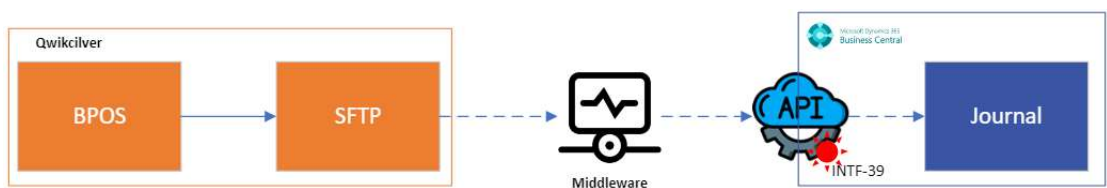

Kanmo can implement separately Business Intelligence applications like Power BI to reconcile AP and AR data between RPRO and Business Central. As RNV appears to face challenges in providing the necessary reports, and using Business Central to manage this process carries significant risks.

2.2.6 Flow Process Distribution Control Panel (To Be)

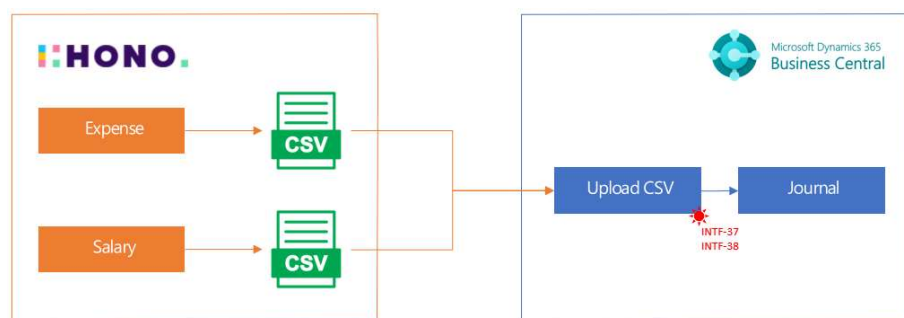

DCP will be maintained using combination of AR Aging Report and Sales Journey Report (Custom). All these processes will be carried out on BC, therefore DCP app will no longer be used. Users can also print various sales documents based on the sales invoice data. Print out documents are not required in BC since WH Team will print Invoice Doc using internal middleware. Kanmo team consider to join dev, and Kreatif will share knowledge to Kanmo IT team for custom development.

2.2.7 Flow Process BPOS (To Be)

1. Every night at 2 a.m., BPOS will share transaction data in the form of a CSV file to SFTP.
2. Middleware will get the CSV File, convert the CSV to JSON Data and forward it to BC by API.
3. BC will receive the Data and forward it to the journal table. User will check the journal and post it if the data is correct.

2.2.8 Flow Process HONO (To Be)

1. All expense and salary transactions will be created, approved, and paid on HONO.
2. Expense and salary data will be downloaded by the user as a CSV file, which will then be uploaded to BC.
3. BC will receive the CSV file and forward it to the journal table. User will check the journal and post it if the data is correct.

2.2.9 Fit Gap List

No	Description	Fit or Gap	Type
INTF-37	Integration Hono - Expense Journal	Gap	Integration
INTF-38	Integration Hono - Salary Summary Journal	Gap	Integration
INTF-39	Integration BPOS	Gap	Integration
INTF-40	Integration PCS - Chart of Account	Gap	Integration
INTF-41	Integration PCS - Journal PCS	Gap	Integration
INTF-48	Integration ESB	Gap	Integration

Notes:

The Fit and Gap mentioned in the BRD is subject to change, and the Fit and Gap Excel list, which will be finalized outside the BRD and confirmed via email, will take precedence over the BRD. The BRD signoff is subject to Kanmo Management final sign off and changes if any will be discussed.
